Veeam Ready Program Overview

The Veeam Ready provides a solution qualification process that helps [Veeam Alliance Program (VAP)](#) members meet Veeam's functional and performance standards. By using Veeam Ready solutions, customers can be assured the solutions are compatible with Veeam Data Platform's features.

These VAP partners must provide a solid, reliable, and scalable solution. By combining their solution with Veeam Data Platform, partners can deliver a powerful data management platform that enables backup modernization, data security and compliance, ransomware protection, and more.

The objectives of the **Veeam Ready** program are to:

- Recognize VAP partners who offer solutions that are compatible and meet performance standards with Veeam product features.

- Qualify and verify VAP partner solutions and document specific configuration settings during verification.

- Assure customers that VAP partner solutions meet a set of operational standards with Veeam products.

Key Benefits

- Inclusion in the Veeam Ready database to showcase that the solution has been qualified and meet Veeam Software's standards.

- Ability to publicize Veeam Ready efforts by including the Veeam Ready logo on solution collateral, websites, campaigns, public forums, and events.

- Use of Not-for-Resale (NFR) product licenses for Veeam Ready qualification purposes only.

- Alliance Solution Architect support during the qualification process to help resolve issues and identify recommended best practices.

Veeam Ready Categories

Veeam Ready qualifies solutions that customers may consider a backup target for applications protected by Veeam Data Platform. Currently, there are five Veeam Ready categories, each with unique testing requirements:

veeam Ready Repository

Veeam Ready: Repository

Primary backup target solutions that have been confirmed to meet or exceed both functional and performance tests for backup and restore operations.

veeam Ready Object

Veeam Ready: Object

Secondary backup target solutions that support object storage are confirmed to be compatible with Veeam products' object storage features, and meet or exceed performance tests.
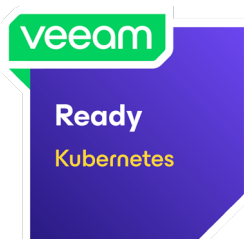

veeam Ready Security

Veeam Ready: Security

Security solutions that have been qualified as compatible with Veeam Backup & Replication's SIEM (Syslog), KMS, Incident API, or Secure Restore security features.

veeam Ready Tape

Veeam Ready: Tape

Tape solutions based on LTO or Jaguar that have been confirmed to be compatible with Veeam Backup & Replication's tape features and operations.

veeam Ready Kubernetes

Veeam Ready: Kubernetes

Kubernetes solutions that have been qualified to support all Veeam Kasten for Kubernetes backup, restore, and migration features.

Partner Requirements

Partners that want to participate in the Veeam Ready program can do so by meeting the following requirements:

- Must participate in the [Veeam Technical Alliance Program (VTAP)](#) and be in good standing.
- Partner solutions must meet requirements outlined in the [Veeam Ready Program Guide](#).
- Must agree to the terms and conditions of the Veeam Ready program.
